

## Backend Health Check

The screenshot shows the Testleaf API client interface. On the left, a sidebar lists collections under '00 - Health & Status', with 'Backend Health Check' selected. The main panel shows a GET request to `{{baseUrl}}/health` with a status of 200 OK. The response body is a JSON object:

```
{
  "message": "DeepEval evaluation API is running",
  "version": "1.0.0",
  "environment": "development",
  "providers": {
    "deepeval": {
      "status": "active",
      "metrics": [
        "faithfulness",
        "answer_relevancy",
        "contextual_precision",
        "contextual_recall",
        "pii_leakage",
        "bias",
        "hallucination"
      ]
    }
  },
  "endpoint": "/api/eval-only",
  "timestamp": "2026-07-31T11:24:20.580Z"
}
```

## Backend Status & Feature Flags

The screenshot shows the Testleaf API client interface. On the left, a sidebar lists collections under '00 - Health & Status', with 'Backend Status & Feature Flags' selected. The main panel shows a GET request to `{{baseUrl}}/api/status` with a status of 200 OK. The response body is a JSON object:

```
{
  "metrics": [
    "faithfulness",
    "answer_relevancy",
    "contextual_precision",
    "contextual_recall",
    "pii_leakage",

## 02 - Multi-Turn Metrics

### Conversation Completeness - Full (Pass)

The screenshot displays the Testleaf LLM Evaluation Framework interface. On the left, a sidebar lists various metrics under 'COLLECTIONS', with '02 - Multi-Turn Metrics' expanded and 'Conversation Completeness - Full (Pass)' selected. The main panel shows a POST request to '({baseUrl})/api/eval-multiturn'. The request body contains a multi-turn conversation. The response is a JSON object with the following structure:

```
1 {
2   "metric": "conversation_completeness",
3   "score": 1,
4   "verdict": "COMPLETE",
5   "explanation": "The score is 1.0 because the LLM response effectively confirmed the user's flight to New York and provided their seat number, fully addressing the user intentions.",
6   "turns": [
7     {
8       "role": "user",
9       "content": "Has my flight to New York been confirmed?"
10    },
11    {
12      "role": "assistant",
13      "content": "Yes, your flight to New York has been confirmed for August 15 at 10:30 AM."
14    },
15    {
16      "role": "user",
17      "content": "What's my seat number?"
18    },
19    {
20      "role": "assistant",
21      "content": "Your seat number is 18A."
22    }
23  ]
24 }
```

The response status is 200 OK, with a response time of 8.11 s and a size of 919 B.

### Conversation Completeness - Low (Fail)

The screenshot displays the Testleaf LLM Evaluation Framework interface. On the left, a sidebar lists various metrics under 'COLLECTIONS', with '02 - Multi-Turn Metrics' expanded and 'Conversation Completeness - Low (Fail)' selected. The main panel shows a POST request to '({baseUrl})/api/eval-multiturn'. The request body contains a multi-turn conversation. The response is a JSON object with the following structure:

```
1 {
2   "metric": "conversation_completeness",
3   "score": 0.5,
4   "verdict": "PARTIAL",
5   "explanation": "The score is 0.5 because the LLM response successfully provided the account balance, aligning with the user's intent to know their balance, but it failed to include information about the last transaction, a specific request made by the user.",
6   "turns": [
7     {
8       "role": "user",
9       "content": "What is my account balance and my last transaction?"
10    },
11    {
12      "role": "assistant",
13      "content": "Your account balance is $2,450.75."
14    }
15  ]
16 }
```

The response status is 200 OK, with a response time of 6.00 s and a size of 859 B.
