

1) Customize the API for Pdf content Extracting working flow

Ans:- Created Langflow to extract values from PDF

Customize the API:-

Enabling the template in Prompt Template

Enabling Groq API key and Modal

Copying the cURL

Importing in Postman

Disabling the stream in Params

Passing the Langflow API key

Go to Form -data and upload the file

The screenshot shows the Postman interface with a POST request to `http://localhost:7860/api/v1/run/9e13684e-daa8-464b-97c9-436842af6c8d?stream=false`. The request body is configured as `form-data` with a file upload for `basic-text.pdf`. The response is a JSON object with the following structure:

```
{
  "outputs": {
    "results": {
      "text": {
        "text_key": "text",
        "data": {
          "text": "Based on the provided document, the invoice due amount output is in the form of an unordered list. \n\nItem 1 is : 50000\nItem 2 is : 50000\nItem 3 is : 60000000",
          "files": [],
          "sender": null,
          "sender_name": null,
          "session_id": "",
          "context id": ""
        }
      }
    }
  }
}
```

In Body, add the input value API key, model name, template and change the input_type as File

The screenshot shows the Postman interface with a POST request to the same LangFlow API endpoint. The request body is configured as `JSON` with the following JSON object:

```
{
  "output_type": "text",
  "input_type": "file",
  "input_value": "basic-text.pdf",
  "tweaks": {
    "Prompt Template-SEQF3": {
      "api_key": "gsk_NKndazsIA3zfrtgrH3W6dyb3FY9akH20x8n70Qo8J3rJMEuXb",
      "model_name": "openai/gpt-oss-20b",
      "template": "Answer user's questions based on the document below:Extract only invoice due amount output as Item 1 is : Item 2 is :Item 3 is :.{}"
    }
  }
}
```

This is the file I uploaded

API Response:-

```
{
  "session_id": "9e13684e-daa8-464b-97c9-436842af6c8d",
  "outputs": [
    {
      "inputs": {},
      "outputs": [
        {
          "results": {
            "text": {
```

```
"text_key": "text",
"data": {
  "text": "Based on the provided document, the invoice due amount output is

```

2) Customize the fields in User stories Reviewer Agent which we did during our classroom session yesterday and run in the postman to verify the result

Ans:- Click the share and select API access

Click on the Input Schema

Enabled the Prompt Template

Input schema is changed to 1

Copy the cURL

Import into Collections

Disable the Stream in Params

Give the API keys in Headers

Remove the session ID in body

Update the input value and Prompt template in body and Send the request

Response from Post man (After Beautify):

Life Insurance User Story Review Report

Executive Summary

The user story clearly communicates the underwriting objective and its intended business outcome. It demonstrates strong alignment with life insurance business goals such as risk assessment accuracy and regulatory compliance. However, the story lacks sufficient detail regarding acceptance criteria, business rules, validations, workflow scenarios, and technical dependencies. These gaps reduce implementation readiness and limit the ability of QA teams to create comprehensive test coverage.

User Story

As an Underwriter, I want to review and approve life insurance applications digitally before policy issuance so that risk assessment is completed accurately and regulatory requirements are met.

Parameter Evaluation

Parameter	Description	Score (Out of 20)
Clarity	The story is easy to understand and uses relevant life insurance terminology. However, supporting business processes and workflow details are not fully described.	16

Parameter	Description	Score (Out of 20)
Completeness	Acceptance criteria, business rules, validations, dependencies, assumptions, and exception scenarios are not sufficiently defined.	14
Business Value Alignment	Strong alignment with underwriting efficiency, risk assessment accuracy, customer experience, and regulatory compliance objectives.	18
Testability	Limited information is available to derive comprehensive positive, negative, boundary, and integration test scenarios.	12
Technical Feasibility	The solution appears feasible within a typical life insurance ecosystem but lacks detailed integration, security, and dependency considerations.	15

Overall Assessment

Overall Quality Score

75 / 100

Quality Rating

Good

Rating Scale:

- 90–100 = Excellent
- 75–89 = Good
- 60–74 = Fair
- Below 60 = Needs Significant Improvement

Detailed Findings

1. Clarity

Strengths

- User role is clearly identified.
- Business objective is explicitly stated.
- Underwriting purpose and expected outcome are understandable.

Areas for Improvement

- Policy issuance workflow is not described.
- Underwriting decision process is unclear.
- Related insurance lifecycle activities are not addressed.

Recommendation

Provide additional context around:

- Policy issuance process
 - Enrollment workflow
 - Beneficiary management
 - Premium billing
 - Policy servicing
 - Claims impact
 - Renewal considerations
-

2. Completeness

Strengths

- Core business goal is present.
- Primary actor is identified.

Gaps Identified

- Acceptance criteria missing
- Preconditions missing
- Business rules missing
- Exception scenarios missing
- Dependency documentation missing
- Validation requirements missing

Recommendation

Add detailed:

- Acceptance criteria
- Eligibility validations
- Underwriting rules
- Approval and rejection conditions
- Assumptions and dependencies

- Error handling scenarios
 - Policy lifecycle requirements
-

3. Business Value Alignment

Strengths

The story contributes directly to:

- Accurate risk assessment
- Regulatory compliance
- Faster underwriting decisions
- Reduced manual effort
- Improved customer experience
- Operational efficiency

Recommendation

Include measurable business outcomes such as:

- Reduced underwriting turnaround time
 - Increased straight-through processing rate
 - Improved compliance audit scores
 - Reduced underwriting defects
 - Improved customer onboarding experience
-

4. Testability

Gaps Identified

The story does not provide enough detail to derive:

- Positive test scenarios
- Negative test scenarios
- Boundary validations
- Integration test cases
- Exception handling scenarios

Recommendation

Define:

Positive Scenarios

- Eligible application approved successfully.
- Required documentation available.

Negative Scenarios

- Missing applicant information.
- Failed eligibility validation.
- Regulatory rule violation.

Boundary Scenarios

- Minimum eligible age.
- Maximum eligible age.
- Coverage amount limits.

Integration Scenarios

- Policy Administration System integration.
 - Underwriting Engine integration.
 - Document Management integration.
 - CRM integration.
-

5. Technical Feasibility

Strengths

The solution is technically achievable within a standard life insurance architecture.

Areas Requiring Additional Detail

- Security requirements
- Compliance requirements
- Integration specifications
- Data validation requirements
- Technical dependencies

Recommendation

Document integrations with:

- Policy Administration Systems (PAS)
- Underwriting Engines
- Billing Platforms
- CRM Systems

- Customer Portals
- Document Management Systems
- Third-Party Data Providers

Also specify:

- Authentication requirements
- Authorization rules
- Audit logging requirements
- Regulatory compliance controls
- Data privacy requirements

Improvement Recommendations Summary

Parameter	Recommended Actions
Clarity	Expand business workflow and policy lifecycle context.
Completeness	Define acceptance criteria, business rules, validations, dependencies, and exceptions.
Business Value Alignment	Add measurable business KPIs and expected outcomes.
Testability	Include positive, negative, boundary, and integration scenarios.
Technical Feasibility	Document integrations, security controls, compliance requirements, and system dependencies.

Final Assessment Summary

The user story demonstrates a strong business objective and aligns well with life insurance underwriting goals. However, it requires additional refinement to achieve implementation readiness. The primary improvement opportunities are in completeness, testability, and technical specification.

Enhancing acceptance criteria, underwriting validations, workflow definitions, integration requirements, and compliance considerations will significantly improve development accuracy, testing effectiveness, and overall delivery quality.

Final Score: 75 / 100 (Good)

The story is suitable for further refinement during backlog grooming before being considered development-ready.
